1. System Introduction & Technical Architecture

WokManeja is an enterprise-grade Payroll, HR, and Finance management system. It has been custom-designed to streamline the complex regulatory compliance tasks, leave auditing requirements, and payroll distributions faced by corporate administrations. By utilizing a local high-speed Node.js and SQLite backend, WokManeja guarantees fast interface response times, robust data integrity, and excellent data privacy.

1.1 Local Backend & SQLite Engine

WokManeja operates via a localized Node.js Express server backend with an embedded SQLite database engine (database.sqlite). The system compiles data structures into structured JSON collections ("staff", "payslips", "users", "hr_requests", "reminders") and writes them to the high-speed SQLite database instantly. This localized approach eliminates traditional remote server connection dropouts and ensures the business continues to operate even during internet disruptions.

1.2 Network Access & Authentication

WokManeja is configured to bind to the local network (0.0.0.0), allowing authorized devices within the same office or network to access the system securely. It features a built-in token-based authentication middleware. Upon initial deployment, a default system administrator account is generated (Username: admin, Password: admin123) which should be changed upon first login.

2. Staff Directory & Regulatory Profiles

The Staff Directory is the foundational module of the system, acting as the Single Source of Truth for all personnel information. Each profile tracks essential professional properties, structural banking values, and personal contact info. These fields are pulled dynamically across the system to populate VNPF reports, payslip records, and bank transfer ledgers.

2.1 Staff Directory vs. Add / Edit Staff

Personnel management is split across two dedicated sidebar menus. Staff Directory is a read-focused, searchable table of every employee record, used for browsing the workforce and launching an edit from the Actions column. Add / Edit Staff is the dedicated data-entry screen: it opens blank for creating a new employee, or pre-filled when arriving from an Edit action, and also carries its own compact Existing Staff picker list with its own search box, so an administrator can find and load another employee's record for editing without navigating back to the Staff Directory.

2.2 Structural Fields and Employee Schema

- **Legal Full Name:** Used for VNPF statutory registration and formal banking distributions.
- **Unique Employee ID:** Auto-incremented format (e.g., WH001, WH002) to prevent identification collisions.
- **Designation / Title:** Designates official organizational title (e.g., Senior Accountant, Lead Bartender).
- **Department Unit:** Assigned business group: Executive, Finance, Operations, Administration, or Consultant.
- **Bank & Account digits:** Identifies bank (e.g., BSP) and account number for direct payroll deposits.
- **Leave Entitlements:** Statutory leave ceilings: defaults to 21 Annual Leave and 10 Sick Leave days per year.

2.3 Lifecycle Active/Inactive Statuses

To preserve history while maintaining clean operations, WokManeja utilizes active/inactive switches:

- **Active Status:** Includes the employee in new payroll runs and proration tables. Active staff appear in bulk processing lists.
- **Inactive Status:** Excludes the record from new payslip runs. The database retains their historical records (past payslips, VNPF contributions, leave logs) intact for compliance audits while cleaning active screens.

[!TIP] QUICK EDIT FROM EITHER SCREEN

Use the search box above the Existing Staff list on the Add / Edit Staff page to jump straight to any employee's record for editing, without leaving the form screen or returning to the Staff Directory.

3. Document Center & Staff Records

The Document Center provides a centralized repository for staff-related files, replacing scattered physical folders and email attachments. Administrators and managers can either upload a document directly on behalf of a staff member or issue a formal request, prompting the employee to upload it themselves through their own portal.

3.1 Requesting & Uploading Documents

- **Staff Member:** Selects the employee this document belongs to.

- **Document Type:** Chosen from a configurable list (defaults include ID Card, Driver License, Contract, and Certificate; custom types can be added via Manage Types).
- **File Attachment:** Optional at the time of request -- leaving it blank creates an outstanding Requested entry and notifies the employee.

3.2 Fulfilling Requests

Staff members see their own outstanding requests marked in red as Requested. Uploading the file satisfies the request and clears the flag; standard users cannot view or manage documents belonging to other staff.

3.3 Cross-Module Document Trail

Certain actions elsewhere in the system automatically generate Document Center entries: a Discipline case that reaches Finalized status registers a Disciplinary Record, and a completed KPI review with an attached scorecard registers a KPI / Appraisal document. This gives administrators a single, auditable file per employee without duplicate data entry.

[!TIP] MANAGING DOCUMENT TYPES

Use "Manage Types" inside the Document Center to add or remove categories (e.g., Visa, NDA, Banking Form) so document tracking matches your company's specific compliance needs.

4. Payroll Disbursements & Statutory Calculations

WokManeja features a double-mode payroll processing engine. Administrators can compile individual payslips using a granular details card, or invoke the Bulk Staff Entry grid to process the entire company's payroll on a single page, complete with live proration calculations.

4.1 Pay Cycles

WokManeja supports granular pay cycle configuration to meet various corporate payroll rhythms. Supported pay cycles include:

- **Weekly:** Payments are calculated and distributed every 7 days.
- **Fortnightly:** Payments are calculated and distributed every 14 days (Every 2 Weeks).
- **Monthly:** Payments are calculated and distributed once per calendar month.

4.2 Earnings Configurations

WokManeja supports several configurable earnings additions:

- **Basic Pay:** Core structured salary or hourly accumulation.
- **Overtime:** See below for calculation breakdown.
- **Severance Package:** Includes a built-in severance calculator that strictly calculates 1 month's remuneration for each year of service.
- **Allowances & Bonus:** Custom line items for standard allowances and one-off bonuses.

4.3 Granular Overtime Rates & Calculations

Overtime is automatically calculated from the basic monthly salary. An employee's standard hourly rate is derived by dividing their monthly basic pay by 220 standard working hours (equivalent to 22 working days of 10 hours each). Based on this hourly value, three statutory overtime multipliers are applied:

- **Standard Weekday:** 1.5x Hourly Rate
- **Standard Weekend:** 2.0x Hourly Rate
- **Public Holiday:** 2.5x Hourly Rate

4.4 Statutory VNPF & Custom Deductions

- **Statutory VNPF:** Auto-calculated at exactly 6% of the employee's Basic Pay, guaranteeing statutory compliance for Vanuatu National Provident Fund filing. The employer match is handled under the reports.
- **Custom Deductions & Loans:** Allows structuring payments to offset outstanding staff loans or corporate advance balances. The custom field features a descriptive memo for Union Fees, equipment cost recoveries, or tax levies.

5. HR Leave Auditing & Monetary Advances

To replace separate tracking spreadsheets and paper applications, WokManeja bundles a centralized HR transactions ledger. This ledger manages the complete workflow of employee absences and company-issued financial loans, feeding records directly into the database.

5.1 Categories of HR Requests

- **Annual Leave:** Tracks standard vacations. Approving this request automatically deducts the specified number of days from the employee's annual balance.
- **Sick Leave:** Logs paid sick leave, tracking it against their statutory annual sick leave entitlement.

- **Leave Without Pay (LWOP):** Records standard unpaid absences. This provides audit trails for monthly salary proration during payslip generations.
- **Payment Advance:** Tracks structural corporate loans. Submitting a Payment Advance registers an outstanding balance under the employee profile, which can then be offset inside the Deduction module of their next payslip.

5.2 Workflow Approval State Machine

All HR submissions progress through a strict, auditable workflow state machine:

1. **Pending (Amber):** Stored in the database and flagged on the supervisor dashboard, indicating review is required.
 2. **Approved (Green):** Finalizes the record. The system deducts leave days from their balance or registers the cash loan, logging a permanent notification.
 3. **Rejected (Red):** Rejects the request. No balances are affected, but the historical trail is kept for payroll auditing.
-

6. Staff Performance (KPI) Management

WokManeja includes a lightweight Key Performance Indicator (KPI) module for structuring periodic staff appraisals, replacing informal or paper-based reviews.

6.1 Recording a KPI Goal

Administrators and managers log a goal or objective for a staff member, along with:

- **Review Period:** A free-text label such as Q1 2026.
- **Score:** A numeric rating from 0-100, giving a quantifiable snapshot of performance.
- **Manager Feedback:** Narrative commentary supporting the score.

An optional scorecard file (e.g., a signed appraisal document) may be attached, which is automatically filed into the Document Center.

6.2 Performance Status Bands

The system automatically classifies each KPI record based on score, with no manual status field required:

- **Exceeds Expectations (Green):** Score of 80 or above.
- **Meets Expectations (Amber):** Score between 50 and 79.
- **Needs Improvement (Red):** Score below 50.

6.3 Feedback Threads

Both managers and staff can add feedback to a KPI record over time; each entry is timestamped and tagged as [Manager Feedback] or [Staff Feedback], building a running conversation rather than overwriting prior notes. Staff logging in under the Standard User role see only their own KPI history under "My KPIs & Appraisals."

7. Staff Discipline & Case Management

The Discipline module manages the full lifecycle of a disciplinary matter, from initial incident logging through to a documented resolution, ensuring fair process and a defensible audit trail.

7.1 Logging an Incident

A manager or administrator opens a case by recording:

- Incident Date (defaults to the current date).
- **Incident Type:** Tardiness, Absence, Insubordination, Misconduct, Performance, or Other.
- **Severity Level:** Verbal Warning, Written Warning, Final Warning, or Suspension.
- Description of the incident.

7.2 Staff Explanation

The affected employee is notified and may submit a written explanation and, optionally, supporting evidence (such as a document or photo). Submitting an explanation automatically advances the case from Pending Explanation to Under Review and alerts the reviewing manager.

7.3 Finalizing the Case

A manager or administrator closes the case by selecting a final outcome -- Verbal Warning Recorded, Written Warning Issued, Final Warning Issued, Suspension Executed, Termination, or Cleared/No Action -- together with closing notes. Finalizing the record:

- Locks the case status to Finalized.
- Automatically files a Disciplinary Record into the employee's Document Center.
- Notifies the employee of the outcome.

[!IMPORTANT] ACCESS CONTROL

Disciplinary records are only visible to Administrators and Managers, and to the affected staff member for their own case -- protecting employee privacy while maintaining accountability.

8. Recruitment & Vacancy Management

WokManeja's Recruitment module manages both the posting of open positions and the tracking of applicants, unifying internal and external hiring pipelines in one place.

8.1 Posting a Vacancy

Administrators and managers create a vacancy listing containing:

- Position title.
- Job Description.
- Application Due Date.

Publishing a vacancy automatically notifies every Standard User account of the opening, encouraging internal mobility.

8.2 Managing Candidates

Each applicant record captures the Candidate Name, Position Applied For, a Status (New, Interviewing, Hired, or Rejected), Notes, and an optional CV/application file.

8.3 Internal Applications

When an existing staff member applies to an internally posted vacancy through their own portal, WokManeja automatically creates a candidate record tagged Internal Application, pre-filled with the applicant's name from their staff profile. Administrators review these alongside external candidates and use the Approve action to move an internal applicant into the Interviewing stage.

9. Finance: Dashboard & Contacts

WokManeja extends beyond payroll and HR into a lightweight full-company accounting suite, letting a business track income, expenses, and its general ledger without a separate bookkeeping package. Every screen in the Finance module ultimately reconciles into the double-entry General Ledger described in Chapter 13.

9.1 Finance Dashboard

The Finance Dashboard is a real-time, read-only snapshot of company financial health, pulling directly from posted ledger activity. It displays:

- **Summary Cards:** Net Income, Cash & Bank, Total Income, and Total Expenses.
- **Income vs. Expense Chart:** A rolling 6-month trend comparison.
- **Expense Breakdown Chart:** The top 10 spending categories for the period.
- **Recent Unpaid Bills and Recent Unpaid Invoices:** Quick-reference tables of open Accounts Payable and Accounts Receivable.

9.2 Contacts (AR / AP)

Contacts is a single, unified register serving both customers and vendors -- there is no separate address book for each side of the ledger.

- **Name:** Required.
- **Type:** Client, Vendor, or Both.
- **Email, Phone, Address:** Optional reference details.

A contact's Type determines where it appears elsewhere in Finance: Client and Both contacts populate the customer list on Invoices (Chapter 10), while Vendor and Both contacts populate the vendor list on Vendor Bills.

10. Invoices & Vendor Bills

Invoices and Vendor Bills form the two sides of WokManeja's Accounts Receivable and Accounts Payable, both posting automatically to the General Ledger as they move through their lifecycle.

10.1 Creating Customer Invoices

A new invoice captures a Client (from Contacts), a Revenue Account (from the Chart of Accounts, defaulting to Sales Revenue), an Invoice Date and Due Date, Notes, and one or more repeatable line items -- each with a Description, Quantity, and Unit Price that combine into a computed line total.

- **Draft:** Saved but not yet issued to the client.
- **Sent:** Issued -- WokManeja books a debit to Accounts Receivable and a credit to the selected Revenue Account.
- **Paid:** Payment received -- WokManeja books a debit to Cash and a credit to Accounts Receivable.
- **Overdue:** Automatically flagged when today's date passes the Due Date on an unpaid invoice.

10.2 Logging Vendor Bills

Vendor Bills record money owed to suppliers. Unlike Invoices, a Bill is a single line amount rather than a multi-item breakdown: Vendor, Expense Account (from the Chart of Accounts), Bill Date, Due Date, Description, Amount, an optional Attachment, and Notes.

- **Unpaid:** Logged and awaiting payment -- books a debit to the selected Expense Account and a credit to Accounts Payable.
 - **Paid:** Settled -- books a debit to Accounts Payable and a credit to Cash.
 - **Overdue:** Automatically flagged once the Due Date has passed on an unpaid bill.
-

11. Daily Income, Banking & Reconciliation

11.1 Daily Income

The Daily Income screen is designed for fast-paced, cash-facing businesses (restaurants, bars, venues) to log each day's takings in seconds. Each entry captures a Date, an Income Source, a Description, an Amount, and a Payment Method.

- **Income Source:** Bar Sales, Food Sales, Events/Functions, Room Hire, Cover Charge, or Other.
- **Payment Method:** Cash, Card/EFTPOS, Bank Transfer, or Mixed.

Saving an entry immediately posts a debit to the Cash/Bank account and a credit to Sales Revenue. Note that Payment Method is currently a descriptive field only -- it does not route the entry into a specific bank account on the Banking screen below.

11.2 Banking

The Banking screen manages the company's bank accounts and any manual transactions against them. A default account (Main Operating Account, ANZ Vanuatu) is seeded automatically if none exist, with fields for Account Name, Bank Name, Account Number, and Opening Balance.

Manual transactions record a Date, the Account, a Transaction Type, a Description, and an Amount:

- **Deposit / Interest:** Books a debit to Cash and a credit to Revenue.
- **Withdrawal / Bank Fee:** Books a debit to a Miscellaneous Expense account and a credit to Cash.
- **Transfer:** Moves funds between two of the company's own accounts (a Transfer To Account field appears) and nets to zero on the consolidated ledger.

11.3 Bank Reconciliation

Reconciliation compares WokManeja's internal cash position against an external bank statement. Enter the Statement Date and Statement Balance, and the system computes the Difference against the current system cash balance. Below, every uncleared Journal Entry is listed with a per-row Clear checkbox, letting an administrator manually tick off transactions as they appear on the physical bank statement.

[!TIP] RECONCILING EFFICIENTLY

At present, reconciliation is performed by manually clearing entries against your printed or downloaded bank statement line by line. Reconcile on a fixed schedule (e.g., weekly) so the list of uncleared entries stays short and easy to check.

12. Expenses, Reimbursements & Budgeting

12.1 Submitting Expenses

Staff and managers can log company expenses against a Category, a Description, an Amount, and a Department. Categories are seeded by default (Office Supplies, Travel, Fuel, Utilities, Repairs, Other) and can be extended.

Every expense enters as Pending. Only Administrators and Managers can Approve or Reject a submission -- approving posts a debit to the selected Category's expense account and a credit to Accounts Payable, while rejecting leaves no financial trace beyond the historical record.

12.2 Staff Reimbursements

The Reimbursements screen consolidates two sources into one payout queue: approved, unpaid "Medical Claim" requests submitted through the HR module, and any reimbursement records added directly on this screen. A single Mark Paid action settles either type -- HR-sourced claims are flagged as paid back on the originating HR request, while directly entered reimbursements post a debit to Miscellaneous Expense and a credit to Cash.

12.3 Departmental Budgeting

Administrators set a Monthly Limit for each Department. WokManeja compares the limit against actual spending for the period, displaying a progress bar that changes color at 75% and 90% of the budget.

[!TIP] BUDGET ACCURACY TODAY

Budget-vs-actual tracking is most reliable for departments that receive Payroll postings, since payroll entries are currently the transactions most consistently tagged with a Department. As more Finance screens adopt department tagging in future updates, Budgeting will reflect a fuller picture of company-wide spend.

13. Chart of Accounts & General Ledger

13.1 Chart of Accounts

The Chart of Accounts is the master list of financial accounts underpinning every other Finance screen. Each account has a Code, a Name, and a Type (Asset, Liability, Equity, Revenue, or Expense). WokManeja seeds 14 default accounts on first use, and administrators can add further accounts as the business grows. This list feeds the Revenue Account dropdown on Invoices, the Expense Account dropdown on Vendor Bills, and the account classification shown on the Finance Dashboard.

13.2 General Ledger

The General Ledger is the single source of truth for every financial transaction in WokManeja -- every Invoice, Bill, Expense, Banking entry, and Daily Income record posts here automatically under an auto-generated reference (e.g., JE-000123).

Administrators may also record a manual Journal Entry directly, selecting an Account from the Chart of Accounts for each line. The system enforces double-entry bookkeeping discipline, requiring a minimum of two lines and validating that total debits equal total credits before the entry can be saved.

[!IMPORTANT] POSTED ENTRIES ARE PERMANENT

Once a Journal Entry is posted, it cannot be edited -- this is a deliberate compliance safeguard that preserves the integrity of the audit trail. To correct a mistake, post an offsetting entry rather than altering the original.

14. Petty Cash Management

The Petty Cash module tracks small, everyday cash disbursements separately from the main Banking and General Ledger workflow, giving cashiers a simple, tightly scoped tool without exposing the rest of the Finance suite.

14.1 PC Dashboard

The Petty Cash Dashboard is a read-only overview showing the Opening Float, Current Balance, Float Used (as a percentage), and the Amount to Replenish, alongside a Monthly Spend by Category table and matching breakdown chart.

14.2 Cash Register

The Cash Register is a running ledger of every petty cash movement -- Date, Voucher #, Description, Category, Cash Out, Cash In, and a rolling Balance -- beginning from the Opening Balance (Float). Administrators and Managers additionally see a Replenish Float button, which prompts for an amount and posts it directly to the register.

14.3 Vouchers

Any user (other than a read-only Viewer) can raise a New Voucher for a small cash expense, recording the Date, Payee, an optional linked Staff Name, a Category (drawn from the configurable Petty Cash category list), a Description, and an Amount. Each voucher is listed with a status indicator reflecting where it stands in the approval process.

14.4 PC Settings

Restricted to Administrators and Managers, PC Settings configures the Opening Float Balance along with a Supervisor Approval Limit and a Manager Approval Limit, defining the cash thresholds at which higher levels of sign-off are required.

[!TIP] MONTHLY SUMMARY

A dedicated Monthly Summary report is planned for a future release; in the meantime, the same monthly category totals are already available on the PC Dashboard.

15. Compliance Reporting & Data Security

15.1 VNPF Remittance Reports

To simplify monthly compliance filings, the VNPF Remittance Report compiles a complete statutory ledger for any selected month. The report pulls all historical payslips, extracts standard Basic Salary values, auto-calculates the 6% Employer share and the 6% Employee share, and aggregates the total 12% joint VUV remittance due. It outputs a print-formatted, government-compliant ledger ready for upload or PDF printing.

15.2 Data Security & SQLite Safety

Because WokManeja operates inside a secure local backend, a few critical precautions must be followed:

- **Backup Ledger:** Proactively export database files using the "Database Manager" tab on the sidebar. Save this backup file in a secure external drive.
- **Inactivity Shield:** If the system is left unattended for 15 minutes, the system triggers an automatic logoff to protect employee pay data.

[!IMPORTANT] SECURITY REMINDER: LICENSING AUDITS

The active corporate license key is bound to your physical machine. You can verify your license details at any time by navigating to "Company Settings" in the sidebar navigation. The system dynamically reads the local activation flag file and displays your license key and activation date in the secure read-only display box.

16. Reports Center

Beyond the individual compliance and executive reports described elsewhere in this guide, WokManeja provides a Reports Dashboard that acts as a single hub linking to every reporting screen in the system.

16.1 Reports Dashboard

The Reports Dashboard shows six clickable summary cards -- HR, Payroll, Finance, VNPF, Executive, and Admin -- each with a live count, giving administrators a quick sense of scale before drilling into a specific report.

16.2 HR Reports

HR Reports summarizes workforce health with Active Staff, Average KPI Score, and Pending HR Requests cards, a Recent HR Activity table of the last ten records, and a chart breaking down HR Requests by Type.

16.3 Payroll Reports

Payroll Reports lets an administrator select a Month and Year and generate a summary of that period's payroll: Total Net Payroll, Total Gross, Total VNPF, and Total Deductions, alongside a Processed Payslips table and a Payroll Breakdown chart.

16.4 Executive Summary Report

The Executive Summary is the most comprehensive single-page report in the system, aggregating live figures from Staff, Payroll, and the General Ledger into one company-wide snapshot. It opens with a dark hero card showing Company Revenue (Year-to-Date), followed by a row of seven metric cards: Cash on Hand, Net Profit (YTD), Total Expenses (YTD), Total Payroll Gross (YTD), VNPF Contributions (YTD), Employees (active versus total), and Pending HR Requests.

Below the metric cards, four charts visualize the underlying trends: a six-month Revenue vs. Expense bar chart, a horizontal bar chart of the top expense categories, a bar chart of Staff by Department, and a bar chart of HR Requests by Status (Approved, Pending, Rejected). A closing Narrative Overview paragraph restates the key figures in plain language, making the page suitable for sharing directly with company directors or external stakeholders.

16.5 Finance & Admin Reports

Finance Reports presents summary Profit & Loss and Balance Sheet views drawn from the General Ledger. Admin Reports shows Users and Defined Roles counts together with a Recent Audit Logs table, giving administrators a fast compliance check without opening the full Audit Logs screen.

VNPF Remittance Reports are covered in full in Chapter 15 (Compliance Reporting & Data Security), and the AI-generated Executive Compliance Report is covered in full in Chapter 22 (AI-Powered Executive Compliance) -- both are also reachable directly from the Reports Dashboard.

17. Dashboard & Real-Time Notifications

17.1 Operational Dashboard

The Dashboard provides a real-time operational overview. It actively monitors core metrics including total active staff, pending HR leave requests, and pending corporate payment advances. Any company reminder marked as "Pin to Dashboard" will prominently display here to ensure all administrators are aware of urgent tasks.

17.2 Notification Bell System

Integrated into the top navigation bar, the Notification Bell tracks the lifecycle of HR requests and system events. When an employee submits a new leave request or cash advance, the system generates a new alert. Administrators can review the alert and, upon taking action

(Approve/Reject), the notification updates dynamically to maintain a clean communication log.

18. Reminders & Database Management

18.1 Company Reminders Module

The Reminders module replaces traditional sticky notes by offering a structured task manager. Users can create categorized reminders (General, Payroll, Compliance, Meeting), assign due dates, and apply priority levels (Low, Medium, High). Critical reminders can be pinned directly to the Dashboard. Once a task is completed, it can be marked as resolved to clear it from the active queue.

18.2 Database Manager & Data Integrity

WokManeja utilizes a local SQLite architecture. To prevent catastrophic data loss during hardware failures, the Database Manager tool is provided to facilitate secure backups.

- **Export Database:** Compiles all employee profiles, payslips, leaves, and configurations into a backup file which should be stored securely on a USB drive or external server.
- **Import Backup:** Restores the system state using a previously exported file. Importing a backup overwrites the current session, ensuring seamless recovery during PC migrations.

[!TIP] BACKUP BEST PRACTICES

It is heavily recommended that the Payroll Administrator performs a full Database Export on the last working day of every month, immediately following the final payslip and VNPF batch generations.

19. Trash Bin & Data Recovery

Rather than permanently destroying data the moment a record is deleted, WokManeja routes nearly every delete action -- staff, payslips, HR requests, KPIs, discipline cases, documents, and more -- into a centralized Trash Bin, giving administrators a 30-day safety net against accidental or malicious deletion.

19.1 How Records Are Archived

When a record is deleted, the system captures the Original Collection it came from, the full Original Data, the date and time of deletion, and the identity of the user who deleted it (or "system" for automated cleanup). Each archived record is stamped with an Expiry Date exactly

30 days from deletion.

19.2 Restoring or Purging Records

From the Trash Bin, administrators can:

- **Restore:** Re-inserts the record into its original collection under a new internal ID, making it active again.
- **Delete Forever:** Immediately and permanently removes the record, bypassing the remaining recovery window.

[!IMPORTANT] AUTOMATIC EXPIRY

Any archived record left unrestored for 30 days is automatically purged the next time the application starts, freeing storage while still giving administrators a full month to catch mistakes. Audit Logs and core Settings are excluded from this system and are never soft-deleted.

20. Users, Settings & Licensing

20.1 Role-Based Access Control (RBAC)

To maintain operational security, WokManeja enforces access boundaries via user accounts:

- **Administrator:** Full access across the entire system, including deleting historical payroll logs and overriding approvals.
- **Manager:** Can view HR reports and authorize leave requests, but cannot modify core payroll configurations or delete historical ledgers.
- **IT / Support:** Can execute Database exports/imports and system resets but cannot view decrypted financial payslips.
- **Standard User:** Read-only access restricted strictly to viewing the staff directory and public memos.

20.2 Company Profile Configuration

The Company Settings panel enables modification of global variables such as the Registered Company Name, Employer VNPF Number, and Corporate Logo. These settings automatically cascade down, updating the headers of all generated Payslips and VNPF Remittance PDFs instantly.

21. Payslip Records & Archiving

WokManeja features a dedicated Payslip Records ledger which acts as the digital archive for every salary disbursement processed through the system. Rather than storing fragile paper copies, the SQLite engine permanently indexes all gross, net, and deduction calculations for rapid retrieval.

21.1 Audit and Reprinting

From the Payslip Records interface, administrators can instantly review historical distributions. If an employee requests a copy of a previous payslip for banking or loan purposes, the system allows the administrator to generate an exact PDF replica of the original payslip without altering current payroll data.

22. AI-Powered Executive Compliance

22.1 Claude AI Narrative Generation

Unlike standard accounting software that only exports tabular data, WokManeja includes an advanced Executive Compliance Report powered by Anthropic's Claude AI. When a monthly report is requested, the system compiles the total Gross Payroll, VNPF deductions, HR leave logs, and Cash Advances, and securely processes them to generate a human-readable executive narrative.

22.2 Automated Observations & Recommendations

The AI Engine automatically flags compliance risks. It generates targeted observations regarding VNPF matching accuracy, abnormal deduction patterns, and unusual spikes in sick leave. Furthermore, it constructs actionable recommendations for the executive team, ensuring the company remains strictly compliant with Vanuatu Labor Laws.

23. Advanced Database Management

23.1 Live Database Viewer

For IT and technical administrators, the Database Management module includes a Live DB Viewer. This interface allows direct read-only inspection of the raw JSON collections (users, staff, payslips, hr_requests) stored within the SQLite engine. This transparency is vital for auditing system integrity without needing external database tools.

23.2 Automated Monthly Backups

To safeguard against data loss, WokManeja features an Auto-Backup mechanism. When enabled in the Company Settings, the background engine detects the final operational day of the month and automatically prompts a secure JSON backup download to the administrator's machine. This guarantees an off-site ledger is preserved at the close of every payroll cycle.

24. Administration Dashboard

The Administration Dashboard is a KPI landing page summarizing overall system health at a glance for administrators, distinct from the individual configuration screens covered elsewhere in this guide -- Company Settings and User Management (Chapter 20), Roles (Chapter 25), the Database Manager and Live DB Viewer (Chapters 18 and 23), and the Trash Bin (Chapter 19).

It displays four summary cards -- Total Users, Total Staff (with an active-count subtext), Audit Entries, and Roles -- alongside two charts, Users by Role and Staff by Department, and a Recent Audit Log Entries table listing the last ten system actions. Navigating to any of the underlying admin screens is done via the sidebar menu, keeping this page a clean, at-a-glance summary rather than another data-entry screen.

25. Roles & Detailed Permissions

In addition to the general RBAC definitions, system interactions are strictly sandboxed:

- **HR Approvals:** While standard users can submit leave applications on behalf of staff, only Managers and Administrators possess the cryptographic clearance to Approve or Reject them.
 - **Record Deletion:** The IT role is granted privileges to purge the database or import backups to resolve corruption. However, to prevent internal fraud, IT users are strictly prohibited from viewing decrypted financial payslips--a capability reserved solely for Executive Managers and Administrators.
 - **Self-Service Leaves:** If a user account is linked to a staff profile in the User Management console, that individual can monitor their own personal annual and sick leave balances securely.
-

26. Accessing Help & Documentation

WokManeja includes a built-in Help & Documentation launcher, accessible to every user from the main navigation menu, providing quick access to the official manuals without needing to search external drives or email attachments:

- **Reference Manual:** This document -- the Complete Operations Handbook -- covering every module in depth.

- **How-To Use Guide:** A companion step-by-step tutorial (WokManeja_How_To_Use.pdf) aimed at first-time users walking through common daily tasks.

Both open directly in a new browser tab as PDFs, and can be downloaded or printed for offline reference.
